

Zomato Restaurant Data Analysis
Name: Saniya Shiya
Internship: Data Science Internship

Figure 1: Distribution of Restaurant Ratings

The distribution of restaurant ratings is concentrated between 3.0 and 4.5, with a peak around 3.7–4.0. Very low ratings are rare, indicating that most restaurants in the dataset receive moderately positive customer feedback.

Figure 2: Top 10 Cuisines

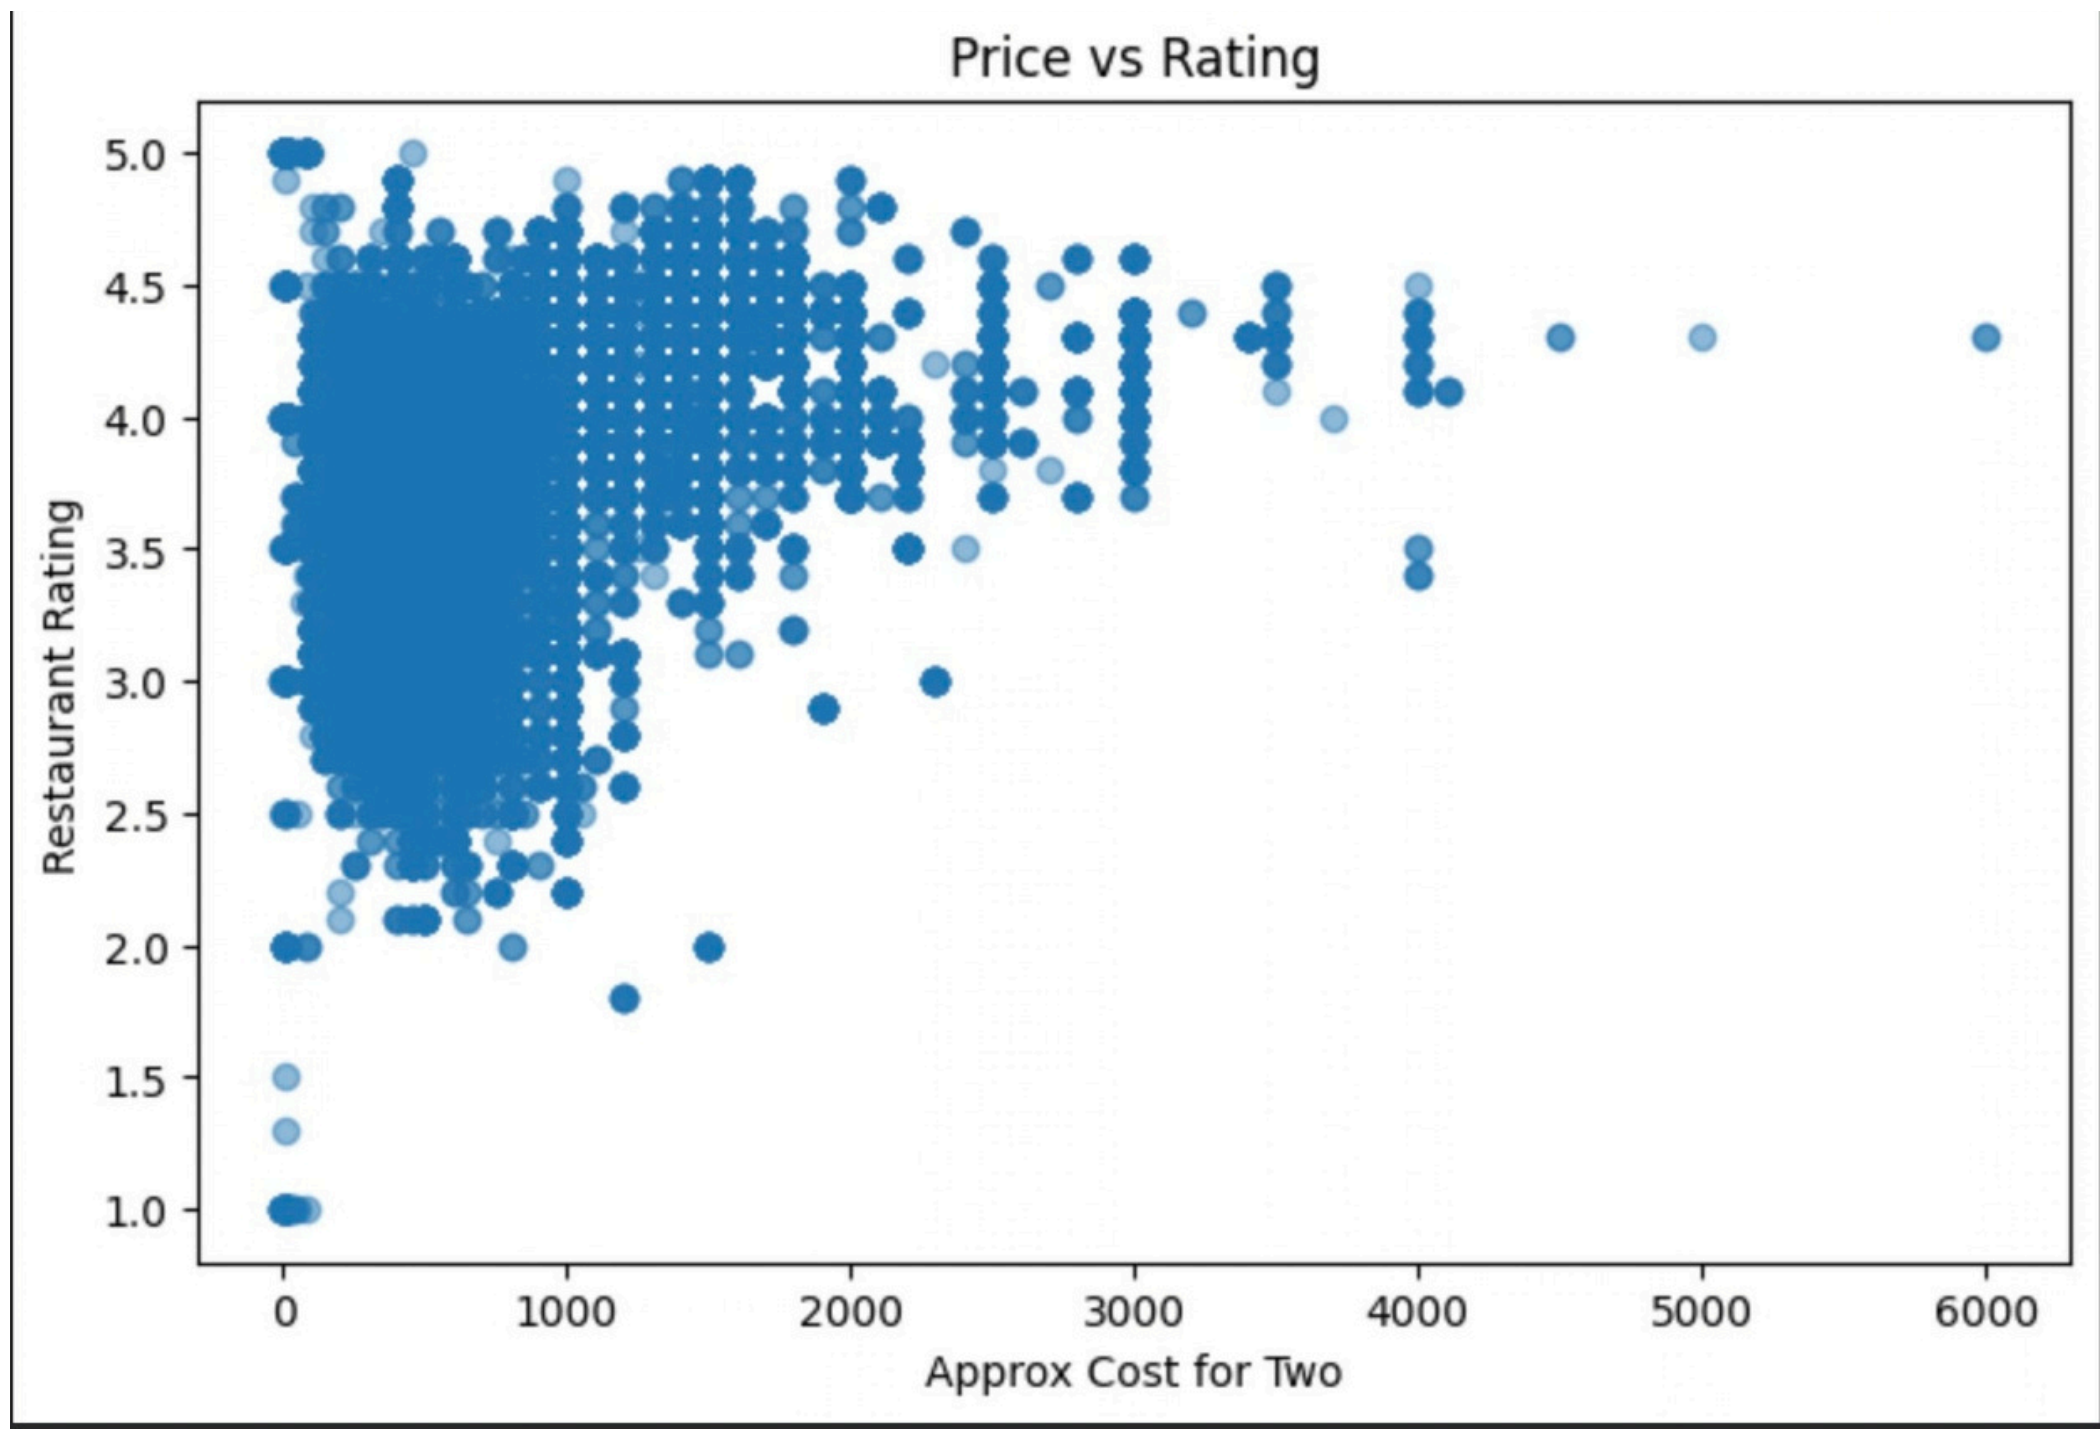

North Indian cuisine is the most prevalent cuisine category in the dataset, followed by North Indian-Chinese combinations and South Indian cuisine. The popularity of biryani, bakery, dessert, and cafe categories highlights customer demand for both traditional meals and quick-service food options.

Figure 3: Top Restaurant Locations

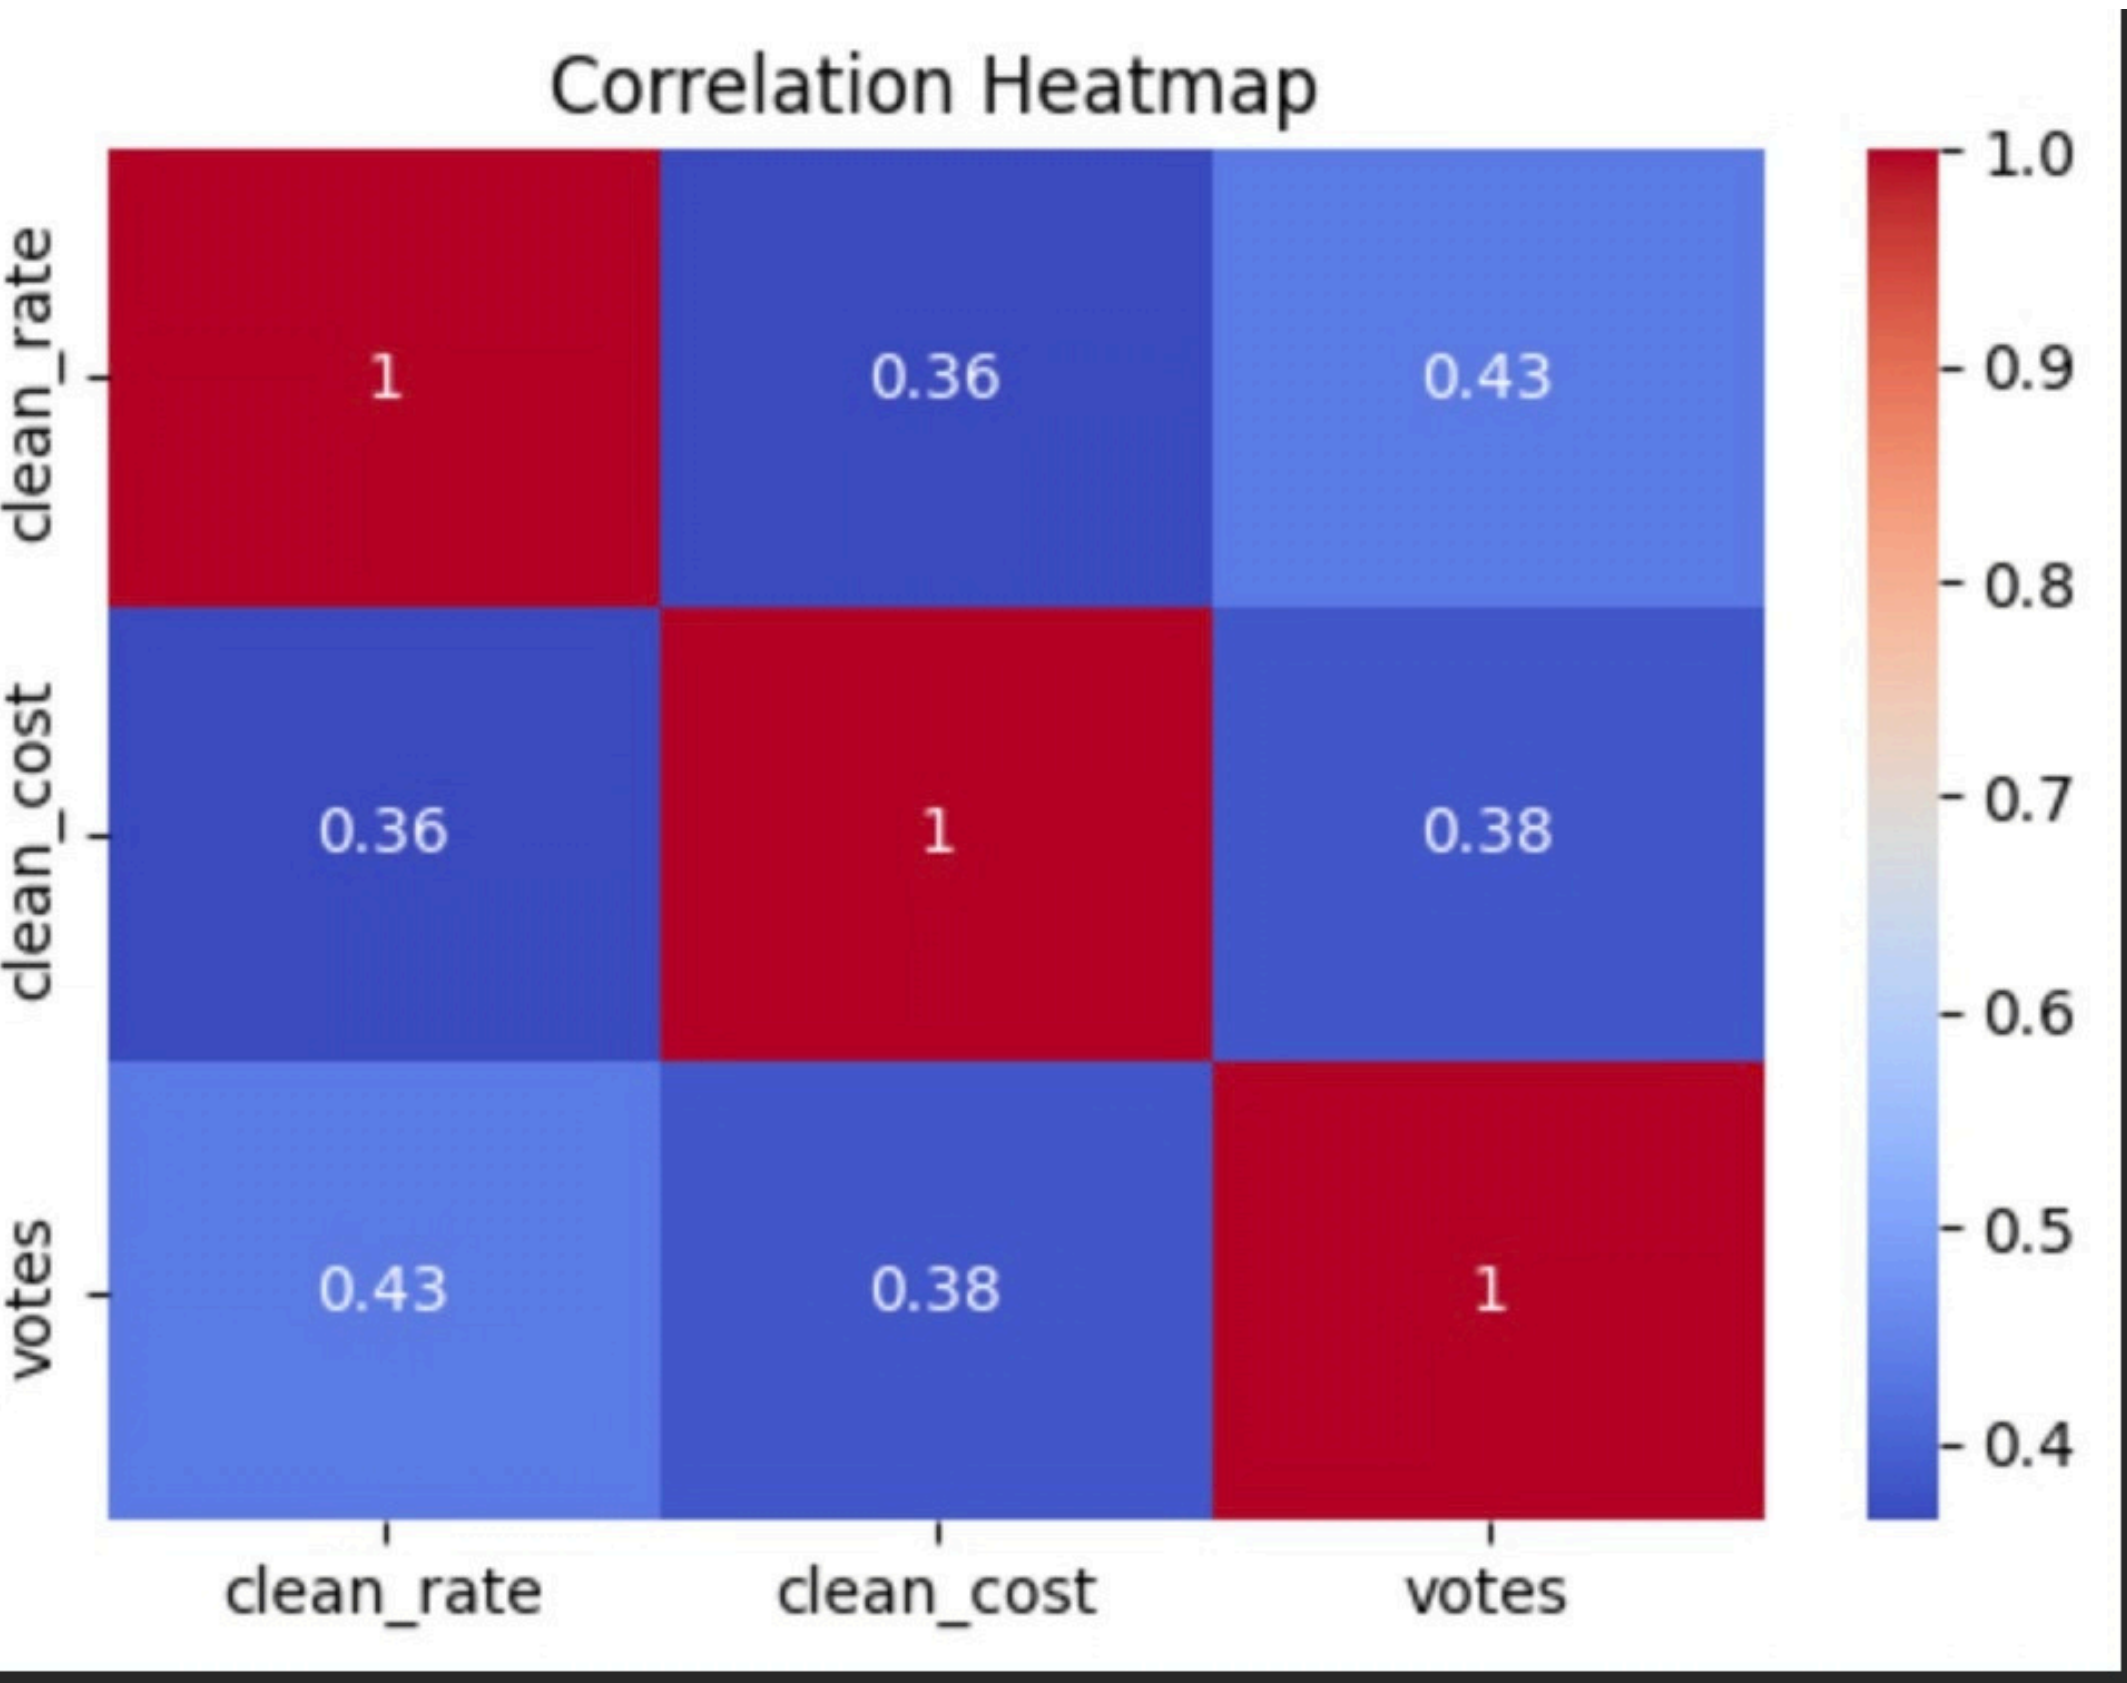

BTM emerged as the most prominent restaurant hub, containing over 5,000 restaurants. HSR Layout and Koramangala 5th Block follow as major food destinations. The concentration of restaurants in these areas suggests strong customer demand and commercial activity.

Figure 4: Price vs Rating

The Price vs Rating scatter plot shows a weak positive relationship between restaurant cost and rating. While higher-priced restaurants generally maintain ratings above 3.5, many affordable restaurants also achieve high ratings. This suggests that price alone is not a strong predictor of customer satisfaction.

Figure 5: Correlation Heatmap

Restaurants with more customer votes tend to have higher ratings. Popular restaurants are generally rated better by customers.

The word cloud reveals that North Indian, Chinese, South Indian, and Biryani cuisines dominate the restaurant landscape. These cuisines appear most frequently in restaurant offerings, indicating strong customer demand and market presence.

Key Findings & Recommendations

Key Findings

- Most restaurants have ratings between 3.5 and 4.2, indicating generally positive customer feedback.
 - North Indian cuisine is the most dominant cuisine category in the dataset.
 - BTM, HSR Layout, and Koramangala have the highest concentration of restaurants.
 - Restaurant cost has only a weak positive relationship with ratings.
 - Restaurants with more customer votes tend to receive higher ratings.
-

Recommendations

1. Focus marketing efforts on North Indian cuisine due to its popularity.
2. Prioritize partnerships and promotions in BTM, HSR, and Koramangala.
3. Highlight highly rated affordable restaurants to attract budget-conscious customers.
4. Encourage customers to leave reviews and ratings to increase engagement.
5. Develop cuisine-based recommendation systems to improve user experience
